

SymNet Solus Level 1 Super-modules

21 December 2016

21Dec16 Level 1 Super-modules for Fulcrum Acoustic loudspeakers were created with *SymNet Designer V10.07* software. The Super-modules are compatible with first-generation Solus processors. They use arbitrary FIR filters to implement the precise temporal (time domain) filters that are responsible for the remarkable benefits of TQ processing. For more information on TQ processing please see the *TQ Explained* and *Implementing TQ Processing* white papers on the Fulcrum Acoustic website.

Using the Super-modules:

- 1) Unzip the contents of "Solus Level 1 Super-modules 21Dec16.zip" file to:
MS Windows 7 / 10 C:\Users\Your User Name\Documents\SymNet Designer 10.0\Super-modules
Note that if you are working with a fresh SymNet Designer installation or have not yet worked with a Super Module, the SymNet Designer 10.0 and Super-module folder(s) mentioned above may not be present on your computer. In this case, open SymNet Designer and follow steps 2 and 3 below. Select "Cancel" in the "Select Super-module file to import" dialogue box. SymNet Designer will at this point create the aforementioned folders.
 - 2) Click on "Super-modules" in the Design View Toolkit in *SymNet Designer* software.
 - 3) Double-click "Import super-module...".
 - 4) Select the desired loudspeaker Super-module and click "Import".
 - 5) The Super-module will appear in your Site File. Wire as appropriate.
 - 6) Lather, rinse and repeat from Step 3 to add more Super-modules.
-

Notes:

- Each Super-module contains a user-adjustable high pass filter, bandpass gain(s), and bandpass limiter(s). All are accessible by double-clicking on a Super-module to open its Control Panel.
 - Super-module output gains assume all amplifier channels have the same voltage gain. If this is not possible, the amp gain trims in the Control Panel may be adjusted to accommodate differences.
 - Bandpass limiter thresholds are not engaged, and should be set by user to match amplifiers.
-

Changes since 22Jan15 release:

- Updated AH96 and GX1265 Super-modules. Added CS118, CS121, FL283, and FLS115 Super-modules.
-
