

Symetrix Composer Level 1 Super-modules

12 December 2016

12Dec16 Level 1 Super-modules for Fulcrum Acoustic loudspeakers were created with *Composer Version 5.4* software. The Super-modules are compatible with Edge, Radius, Prism, and Solus NX processors. They use arbitrary FIR filters to implement the precise temporal (time domain) filters that are responsible for the remarkable benefits of TQ processing. For more information on TQ processing please see the *TQ Explained* and *Implementing TQ Processing* white papers on the Fulcrum Acoustic website.

Using the Super-modules:

- 1) Unzip the contents of "Composer Level 1 Super-modules 12Dec16.zip" file to:
MS Windows 7 / 10 C:\Users\Your User Name\Documents\Composer 5.4\Super-modules
Note that if you are working with a fresh Composer installation the Composer 5.4 and Super-module folder(s) mentioned above may not be present until you run Composer for the first time.
 - 2) Click on "Super-modules" in the Design View Toolkit in *Composer 5.4* software.
 - 3) Double-click "Import super-module...".
 - 4) Select the desired loudspeaker Super-module and click "Import".
 - 5) The Super-module will appear in your Site File. Wire as appropriate.
 - 6) Lather, rinse and repeat from Step 3 to add more Super-modules.
-

Notes:

- Each Super-module contains a user-adjustable high pass filter and bandpass gain(s). All are accessible by double-clicking on a Super-module to open its Control Panel.
 - Super-module output gains assume all amplifier channels have the same voltage gain. If this is not possible, the amp gain trims in the Control Panel may be adjusted to accommodate differences.
-

Changes since 06May16 release:

- Added FL283 and FLS115 Super-modules.

Changes since 16Jan15 release:

- Updated AH96 and GX1265 Super-modules. Added FL283 and FLS115 Super-modules.
-
